

✅ **Assignment: Sentiment Analyzer (Full-Stack + AI)**

🎯 **Goal:** Upload conversation text → analyze sentiment → show insights via UI.

🧩 **Expected Solution Architecture**

Frontend

- **React / Next JS**
 - Deploy on **Netlify / Vercel**
 - Features:
 - Login screen (basic auth is fine)
 - File upload (.txt)
 - Results dashboard (sentiment breakdown)
-

Backend / Automation

- **n8n** or any agentic orchestration tool

Output Expectations

- Overall sentiment: ✅ Positive / Negative / Neutral
- Sentence-level sentiment
- Identification of the right KPIs which can be derived from a phone call

📊 **KPIs for Evaluation**

1. AI Quality: Logical accuracy of sentiment, Clear reasoning (if LLM used)

3. Architecture: Clean separation (UI → n8n → AI)

4. UX/UI: Clean dashboard, Easy upload + readable results

5. Creativity

- Charts
- Emotion detection
- Conversation summary
- Extra KPIs / Features
